Overview sudden painless loss of vision. Flashes of light in the peripheral field of vision, floaters on the temporal side of the central vision. Dense shadow that starts peripherally and progresses towards the central vision, a veil or curtain over the field of vision. Severe pain (ocular or headache), decreased visual acuity, seeing haloes, semi-dilated pupil, hazy cornea. Acute onset painful eye, blurred vision and photophobia. Small, fixed oval pupil, ciliary flush. Severe pain, worse on movement, te
